

# NOISE CONTROLS VIA RFID SYSTEM

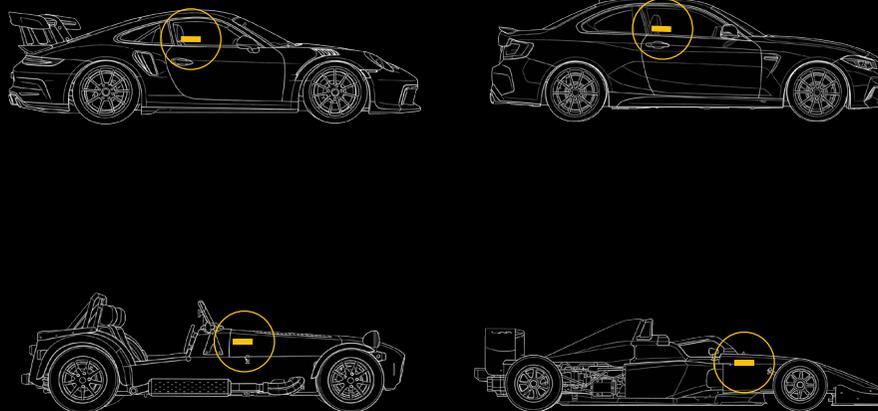

We inform you that as from the 2026 season, the noise emissions of any vehicle on track will be monitored via an RFID system. Any exceedance will therefore be automatically recorded.

To this end, each vehicle must affix an RFID sticker on the right-hand side of the vehicle. This sticker will be provided to you prior to your trackday.

**Please note:** the sticker must not be placed on carbon or metal surfaces.

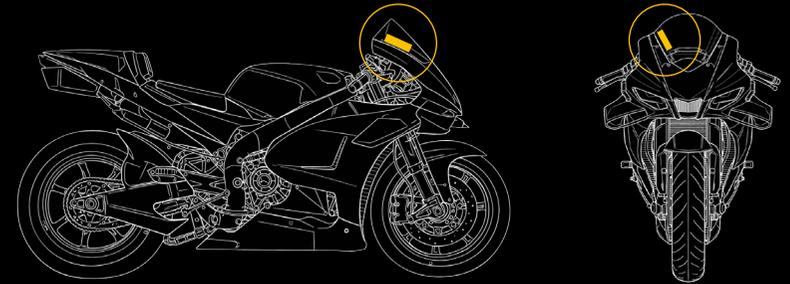

## 1. RFID STICKER PLACEMENT ON A CAR

When the participant is seated in the car, the RFID sticker must be affixed horizontally on the right-hand side of the vehicle, on the window if the vehicle is equipped with one.

## 2. RFID STICKER PLACEMENT ON A MOTORCYCLE

When the participant is seated on the motorcycle, the RFID sticker must be affixed horizontally on the right-hand side plexiglass of the motorcycle.

## 3. ORGANISER'S OBLIGATIONS

The organiser must:

- Provide an Excel spreadsheet indicating the type of vehicle (brand & model), the identification number, as well as the RFID sticker number before the start of the track activity.
- This Excel spreadsheet must be sent to [db@spa-francorchamps.be](mailto:db@spa-francorchamps.be) no later than the day before the track activity. Any modification must be communicated immediately.
- Ensure that each vehicle entering the track is fitted with an RFID sticker.

## 4. SYSTEM OPERATION

Nothing changes with regard to noise limits, warnings, or the exclusion of vehicles that do not comply with the regulations in force. Only the monitoring process will now be automated.
